

Serie MOTOR VAPOR

Série MOTOR VAPOR

La serie MOTOR VAPOR è costituita da innovativi sistemi multifunzione che combinano l'azione pulente del vapore, o dell'acqua, insieme ad una potente aspirazione.

La potenza del vapore è ottenuta grazie alla rivoluzionaria caldaia in rame con resistenza esterna anticalcare a garanzia di prestazioni ed affidabilità nel tempo.

La possibilità di impiegare contemporaneamente la forza pulente del vapore o dell'acqua insieme all'aspirazione con motori bistadio ed un sistema filtrante a "doppia porosità" antibatterico rende il lavoro rapido ed efficace soprattutto quando si tratta di dover agire su grandi spazi o superfici per togliere con efficacia qualsiasi tipo di

The MOTOR VAPOR series consists of innovative multifunctional systems that combine the cleaning action of steam, or of water, along with a powerful aspiration.

The power of steam is obtained thanks to the revolutionary copper boiler with external anti-scale resistor to ensure performance and reliability over time.

The opportunity of using simultaneously the cleaning power of steam, or of water, along with two-stage motor aspiration and an "double porosity" antibacterial filtering system makes work fast and effective especially when it comes having to act on large spaces, or surfaces, to remove effectively any type of dirt.

In some models it is possible also to use simultaneously a specific detergent to attack with greater force dirt and grease.

These multifunction innovative cleaning systems can aspire not only dust but also liquids and solid material and there is no activity that cannot be satisfied by the performance and several applications: car-washing services, medical consulting rooms, jewellers, mechanical workshops, construction and cleaning companies, hotels, residences, agrotourisms, hospitals, beauty salons, gyms, restaurants, bakeries, dairies, confectioneries, bars, grocery stores, etc.;

Standard and optional accessories allow the opportunity of use without limits.

La série MOTOR VAPOR se compose de systèmes multifonctions innovants qui combinent l'action nettoyante de la vapeur ou de l'eau à une puissante aspiration.

La puissance de la vapeur est obtenue grâce à la chaudière révolutionnaire en cuivre avec résistance externe antitarde a garantie de performances et de fiabilité dans le temps.

La possibilité d'utiliser simultanément la puissance nettoyante de la vapeur ou de l'eau avec l'aspiration des moteurs biétagés et d'un système de filtrage à "double porosité" antibactérien permet un travail rapide et efficace surtout quand il s'agit d'œuvrer sur de grands espaces ou surfaces et d'éliminer efficacement tout type de saleté.

Sur certains modèles il est possible d'utiliser également un détergent spécifique pour lutter davantage contre la saleté et la graisse.

Ces systèmes nettoyants multifonctions innovants peuvent aspirer les poussières mais aussi les liquides et les matériaux solides; tous les secteurs d'activités peuvent trouver satisfaction grâce à la performance et les nombreuses applications: stations de lavage autos, studios médicaux, bijoutiers, ateliers de mécanique, entreprises de construction et de nettoyage, hotels, résidences, agritourismes, hôpitaux, salons de beauté, gymnases, restaurants, boulangeries, laiteries, pâtisseries, bars, épiceries, etc.

Les accessoires standard ou en option permettent une possibilité d'emploi sans limites.

La serie MOTOR VAPOR está formada por innovadores sistemas multifunción que combinan la acción limpiadora del vapor o del agua con una potente aspiración.

La potencia del vapor se obtiene gracias a un revolucionaria caldera de cobre con resistencia externa anticalcárea que garantiza las prestaciones y la fiabilidad a lo largo del tiempo.

La posibilidad de usar contemporáneamente la fuerza limpiadora del vapor o del agua junto con la aspiración con motores biestadio y un sistema de filtración de "doble porosidad" antibacterico apunta rapidez y eficacia al trabajo sobre todo cuando hay que tratar grandes espacios o superficies para eliminar eficazmente cualquier tipo de suciedad.

MOTOR VAPOR series

Serie MOTOR VAPOR

sporco.

In alcuni modelli è possibile anche utilizzare contemporaneamente uno specifico detergente per aggredire con maggiore forza lo sporco ed il grasso.

Questi innovativi sistemi pulenti multifunzione possono aspirare non solo polveri ma anche liquidi e materiale solido, e non esiste attività che non possa essere soddisfatta dalle prestazioni e dalle numerose applicazioni: autolavaggi, studi medici, gioiellieri, officine meccaniche, imprese edili e di pulizia, alberghi, residence, agriturismo, ospedali, centri estetici, palestre, ristoranti, panifici, caseifici, pasticcerie, bar, negozi alimentari...

Accessori standard ed optional consentono la possibilità d'impiego senza confini.
